TWO SIXTEENTH CENTURY FRESCO PAINTINGS AT PERUGIA REPRESENTING ST. PAUL’S SHIPWRECK IN MALTA

Gerald Bugeja

In the Benedictine church of St. Peter at Perugia there hang on the inside of the East Wall two detached frescoes. These represent the Shipwreck of St. Paul and the Landing of St. Paul in Malta. These paintings date back to the sixteenth century; indeed we know the year in which payment was effected: 1556. Intrigued by the pictorial quality of these paintings as well as by their iconography, the present writer has carried out research on these two paintings. The writer feels moreover, that a particular painting in Malta should be singled out for special comment since it seems indebted to one of these frescoes. The panel representing the landing of St. Paul in Malta - which forms part of a polyptych at St. Paul’s Parish Church at Rabat - in spite of its naiveté, owes its compositional syntax to the homonymous Perugia painting.

A brief outline of the life of the painter who carried out these paintings would not be amiss. Leonardo Cungi was born in Sansepolcro, in the province of Arezzo in Tuscany, in the first quarter of the sixteenth century. He moved to Rome where he came into contact with Michelangelo’s followers. A declaration of Tommaso dei Cavalieri regarding a very close friendship between him and Buonarroti’s coterie was published in 1938 by Bernard Berenson. Vasari, indeed, in the Life of Perino del Vaga refers to a series of sketches carried out by Cungi on the frescoes of the Sistine Chapel. These drawings which formed part of Perino del Vaga’s collection, were sold by his heirs after the artist’s death in 1547. It was Milanesi who first suggested that a group of sketches at the Uffizi

2. The author thanks Prof. F.F. Mancini of Perugia University for helping him in this research.
must be his. Berenson moreover, attributes other sketches to Cungi. These draw on the Cappella Paolina frescoes and on two well-known sketches of Michelangelo carried out for Tommaso dei Cavalieri (now at Windsor): the Putti Bacchanaal and the Fall of Phaethon.

One must admit that the problem with Cungi's sketches is a thorny one, mainly because some of his sketches have long been attributed to Michelangelo himself, and museum authorities are reluctant to shift attributions from a major to a minor painter. For instance, when the present writer wrote to the Teyler Museum in Haarlem they wrote back stating categorically that "there are no drawings attributed to Cungi in the collection". And yet a critic of no less a masion as Bernard Berenson attributes other sketches to Cungi. These drawings attributed to Cungi in the collection are from a minor painter. The style of Leonardo Cungi has been aptly described by F.F. Mancini as a fusion of themes from Michelangelo with the expressive modes of Raphael. This style is best exemplified in the Ascension of Christ executed in 1558 for the Confraternity of St. Francis at Perugia, two years after the St. Paul frescoes at St. Peter's Benedictine Church. This style owes a great deal to the art of Perin del Vaga and Raffaellino del Colle, who was also from Sansepolcro.

In 1561, Cungi worked in Rome in the coterie of Federico Barocci, he decorated Pius IV's suite in the Vatican with fresco paintings. From 1563 to 1566 Cungi was a collaborator of Daniele da Volterra in the decoration of the nave's coffered ceiling in San Giovanni in Laterano.

In the *Shipwreck* scene, the Mannerist postures are inspired by Michelangelo’s *Last Judgement*, carried out fifteen years earlier, and whose vast range of anatomies L. Cungi has observed and sketched. The present writer is certain that Cungi utilised at least three of these drawings, namely n.17354, 17360 and 17364. These portray twisted figures of human beings, or demons clutching humans; Cungi used them as models for the people overboard clutching bulks of wood. Cungi’s drawings of the *Fall of Phaethon* (n.17351) inspired the reclining figure on the left of the painting. The figure clutching at the vessel echoes a similar figure of the *Fire in the Borgo* of Raphael.

As regards the forms of the figures both in the foreground and in the background, one notes that the movements are poised and formalized, and instead of creating drama, they have a decorative and graceful air: it suggests a rite rather than catastrophe. Most probably, for the figures on the vessel, he drew of creating drama, they have a decorative and graceful air: it suggests a rite rather than catastrophe. Most probably, for the figures on the vessel, he drew

As regards the composition of the painting one notes that it is made up of a number of planes which are kept quite distinct: there are at least four clear-cut planes. This division into clearly visible planes is a Renaissance technique, which laid a premium on symmetry and order, and which Cungi could have observed in the paintings of Perino del Vaga, who in turn had drawn on Raphael. We note however, the mediaeval trait of portraying twice St. Paul.

Regarding the iconographical details, one observes in the first plane that St. Paul has a chain round his neck, which he holds in his left hand. His right arm is outstretched over the fire and the viper is in the act of biting his hand. St. Paul is wearing a short tunic which reaches just above his knees. This tunic seems to be woven out of a very fine fabric since it is tight-fitting and transparent in such a way as to allow anatomical forms to be better assessed. The painting underlines the meeting of St. Paul with Malta’s leaders. This iconographical details are to be appreciated within the context of Renaissance art: faithfulness to the historical text (St. Paul, a prisoner, meeting Malta’s representatives and shaking off the viper, as well as St. Paul healing Publius’ father); the shipwrecked vessel in the middle-ground with the name *Dioskouroi* (the twin brothers Castor and Pollux displayed on the sail of one of its masts); the importance assigned to ideal beauty: all figures, both nude and dressed, have harmonious proportions; ordered and rhythmically articulated composition - note the balance created by the two groups flanking St. Paul, as well as the two walled cities and mountains, in the distance. The identification of these walled cities is rather problematic. Certainly the bay portrayed does not refer to St. Paul’s Bay: it is indeed a harbour above which there arise a number of small bastions. In the middle there appears to be a basilica-like structure with two storeys. On the far left a classical gate with a triumphal arch, architrave and pediment may be observed. A round Pantheon-like structure in the centre is also visible. These details are certainly not the product of the painter’s imagination; Malta, being under Roman rule at the time, would have had classical buildings. The Benedictines moreover, who commissioned this work, would have been familiar with Cicero’s *Verrines*, where it is explicitly stated that very near a promontory there was the temple of Juno: “Ab eo oppido non longe in promontorio fanum est Junonis antiquum...” So Cungi must have been told to draw the vessel in a harbour, on one side of which there arose a promontory near which there was the shrine of Juno (the Pantheon-like structure, most probably). He was not aware, however, that, by so doing, he amalgamated two scenes which referred to two different places. Cungi’s settings is nonetheless stimulating since Paul’s visit is set in its Roman pagan context.

It would be fruitful if this toposographical aspect were to be further studies. According to the Maltese Biblical Scholar, Paul Guillaumier the scene seems to be set in the Salina harbour, which was still operative in Roman times. If this interpretation is correct, the two hills are the Wardija one (on the right) and the Mdina one (on the left) respectively. It seems to the present writer that the fact that the scene represented is that of “Malta Africana” is of the utmost importance

19. Verbal communication
since it is the earliest known shipwreck painting wherein reference is clearly made to the island of Malta and not Meleda, as the landing place mentioned in the Acts \(^\text{20}\). This importance in the island of Malta is to be seen in the context of the island’s growing prestige due to the presence of Knights of St. John. If one takes into account that these came to Malta in 1530 and that a very important book about Malta (the *Insulae Militiae Descriptio*) was published and also translated in Italian in 1545 \(^\text{21}\), one understands why in 1556 in an important Benedictine church it is deemed fit that the scene of St. Paul should be Malta’s and not Meleda’s.

Apart from this iconographical importance, these two paintings are indeed very interesting, pictorially since they are rare - if not unique - exemplars of a particular amalgam or Renaissance and Mannerist modes of expression as applied to the shipwreck of St. Paul. One may synthesise these as: historical veracity; ideal beauty; graceful elegance.

---

**From 1556 to 1580, that is from the date of the execution of the Perugia frescoes and that of St. Paul’s Shipwreck at the homonymous Church at Valletta, dramatic and important events took place within the Church which changed its attitude to religious art. In the 25th session of the Council of Trent, strict norms were set by which artists had to abide when executing works of art commissioned by religious authorities. Paintings were expected to be free from superstition (*superstitio*), voluptuousness (*lascivia*), excessive charm (*procax venustas*), and lack of order (*nihil inordinatum aut praepostere et tumultttrarie accomodatur*). This type of Counter Reformation act is associated with the Jesuit culture. In fact da Lecce, better known locally as D’Aleccio before moving to Malta, was imbued with these ideas and had had the opportunity to see them carried out in the Oratorio of the Gonfalone in Rome. Father John Azzopardi has most usefully shifted the attribution from Paladini to Matteo d’Aleccio \(^\text{22}\) since now art historians may better appreciate this painting. The painting in Valletta is certainly very important, and its iconography, as M. Buhagiar has justly underlined \(^\text{23}\) has been a point of reference for subsequent ‘Shipwreck’ representations.

One notes that Mannerist modes are prevalent in this painting. The ability of the painter lay in following the vein of the Gonfalone painters \(^\text{24}\) in fusing as if on a stage-set three episodes related to the shipwreck of St. Paul in Malta. The *mise-en scène* contains three moments: the shipwreck; the viper incident; the quasi-apotheosis of St. Paul. In other words, what other previous painters - Gothic and Renaissance - had treated as separate incidents by assigning different paintings to different sources such as in polyptychs (including Cungi’s approach), d’Aleccio amalgamated in a superbly dramatic canvas; wherein the iconographical originality of this painting certainly lies. What interests us here is the shipwreck scene in the background. It appears to us that D’Aleccio might have drawn the Cungi ‘Shipwreck’: there are the broken masts, a figure clinging to the vessel (very similar to the one in Cungi’s) as well as various figures trying not to drown in the billowing waves. Certainly, D’Aleccio treated differently certain details, but the overall *idea* was Cungi’s. However, by setting St. Paul’s shipwreck at St. Paul’s Bay, Cungi’s topography had to be drastically changed.

Some eight years later in 1588, an unknown painter executed a polyptych for St. Paul’s Parish Church at Rabat. The polyptych has a big central painting which represents Saint Paul holding a sword and the Bible. Around this central panel there are a number of panels representing significant episodes of the Life of St. Paul. On the extreme left the shipwreck scene is represented. To my mind, this scene is basically Cungi’s, especially in composition. If, at first glance, this does not seem so, it is because the painter saw to it that it should be *censored*: that is, it had to abide by the Counter-Reformation precepts to which reference has already been made. In the first place, he eliminated those elements which the Counter-Reformatory mentality termed as “*procax venustas*”, that is, provoking beauty. So this painter removed the semi-nude male and female figures. St. Paul’s tunic was lengthened so that no elegantly sinuous legs be seen. All the figures wear also full-length robes. What is indeed striking in St. Paul’s figure is its similarity to Cungi’s: the saint is portrayed in the act of walking with his right-hand shaking off the viper and his left-hand lifting his robe, while in Cungi’s

---

20. In the ‘shipwreck’ scene in earlier paintings, either no reference is made at all to Malta (as, for instance, in the Mdina International Gothic Polyptych which has been recently restored and the walled city scene as been removed since has been a later addition), or reference is made to Meleda (as in the copy of the lost fresco of “San Paolo fuori le mura”).

it lifted the chains; which I interpret as an attempt to temper veracity with decorum: one of the Counter-Reformation tenets explicitly prohibited indecency (*nihil profanum nihilque inhonestum*). Cungi’s topographical details had to undergo a radical surgical operation.

In fact the painter - a Maltese one most probably - eliminated the cities, since in what is believed to be the traditional landing place there was no such city. In this regard, D’Aleccio’s had already set the pattern. So, the Rabat Polyptych had observed that fundamental tenet of Gregory the Great, who had required that art should serve to teach and strengthen one’s faith: “*Erudire et confirmare populum*”. For this very reason, the word **DIOSKOUROI** on the vessel was removed, since it might have evoked pagan connotations.

May I add one last comment? It is intriguing that no panel illustrates the grotto, it is indeed strange that the grotto, which was already enjoying a certain reputation, should not be included in the Polyptych, which must have served as the main altarpiece of a church abutting on to this grotto. But, there is a possible reason. The ‘grotto’ episode, being of a legendary kind, might have seemed offensive to the Counter-Reformation mentality of the ecclesiastical authorities, since no episodes which were the result of “superstitio” were to be accepted.

The two Cungi’s frescoes in Perugia, at about the same date suffered the same fate by the same Counter-Reformation mentality. In 1591 the apse was totally renovated and they were replaced by a new altarpiece representing the *Death of St. Benedict.*
'Landing of St. Paul in Malta', Benedictine church of St. Peter, Perugia.
